## Mondelēz International to switch to 100% renewable electricity for its Victorian factories

- Many of Australia & New Zealand’s favourite Cadbury, The Natural Confectionery Company, and Pascall treats to be made with 100% renewable electricity
- Mondelēz International’s Australia and New Zealand carbon footprint to be halved
- Carbon from electricity used across five Australian factories reduced by over 80%

---

**MELBOURNE, AUSTRALIA: June 30, 2020** – Mondelēz International has today announced it will be switching to 100% renewable electricity for its two Melbourne factories that make some of Australia’s favourite Cadbury, The Natural Confectionery Company and Pascall treats.

The company has partnered with a range of businesses from across Victoria to establish a power purchase agreement to source renewables from the Yaloak South wind farm west of Melbourne.

The switch to renewable electricity means that many of the Cadbury, The Natural Confectionery Company, Pascall and Sour Patch Kids treats enjoyed by generations of Aussies and Kiwis will now be made with 100% renewable electricity. This includes Cadbury Cherry Ripe, Crunchie and Picnic bars, Cadbury Easter eggs and bunnies, The Natural Confectionery Company jellies and Pascall lollies including Pineapple Lumps.

Director of Integrated Supply Chain for Australia and New Zealand – Shalaby Mohamed – said the shift to renewable electricity will dramatically reduce the company’s carbon footprint in Australia.

“Our investment in renewables will prevent almost 40,000 tonnes of carbon from entering the atmosphere each year, and reduce the carbon footprint from electricity used across our five Australian factories by more than 80%”, he said.

"We're committed to making our products the right way and reducing the impact of our operations on the planet, and using 100% renewable electricity for the two Melbourne factories that make so many of our popular Cadbury, The Natural Confectionery Company and Pascall treats will play a significant part in reducing our carbon footprint.

“By investing in renewables, the total carbon footprint of our business across Australia and New Zealand will be halved.”

The power purchase agreement to invest in local renewables – starting in 2021 - has been facilitated by the City of Melbourne. The agreement includes a diverse group of organisations including RMIT University, CBUS Property, ISPT, Fulton Hogan, Citywide Asphalt, and Deakin University.
